DEPARTMENT OF THE ARMY PERMIT

General Permit Number 25: Programmatic General Permit for Activities Requiring Review Under Section 404 of the Clean Water Act Within the Established Boundaries of DuPage County, Illinois

Permittee: The General Public in DuPage County, Illinois

Issuing office: Chicago District, U.S. Army Corps of Engineers

DEFINITIONS: The term "you" and its derivatives, as used in this permit, means the permittee or any future transferee. The term "this office" refers to the appropriate district or division office of the Corps of Engineers having jurisdiction over the permitted activity or the appropriate official of that office acting under the authority of the commanding officer. The term "high-quality aquatic resources (HQARs)" means aquatic areas considered to be regionally critical due to their uniqueness, scarcity, and/or value, and other wetlands considered to perform functions important to the public interest, as defined in 33 CFR Part 320.4(b)(2). These resources include bogs, ephemeral pools, fens, forested wetlands, sedge meadows, wet meadows, seeps, streams rated Class A or B in the Illinois Biological Stream Characterization study, wet prairies, wetlands supporting Federal or Illinois endangered or threatened species, and wetlands with a floristic quality index of 20 or greater or mean C value of 3.5 or greater. These areas are generally considered unsuitable for dredge or fill activities.

The general public in DuPage County, Illinois is authorized to perform the work described below in accordance with the following terms and conditions.

Description of General Permit: This programmatic general permit authorizes the government of DuPage County, Illinois to assume responsibility for the review of projects within DuPage County requiring authorization under Section 404 of the Clean Water Act, which is currently administered by the Chicago District, Corps of Engineers. The general permit will be applicable where the discharge of dredged or fill material into wetlands and other waters of the United States will not result in more than minimal impacts to the aquatic environment. The types of projects that will be covered by the general permit may include, but would not be limited to, those projects that would discharge dredged or fill material into wetlands and other special aquatic sites, or those projects that would seek to drain, flood, or excavate these areas.

This general permit applies only to Section 404 activities within DuPage County. Activities specifically excluded from the general permit include any activities regulated under Section 10 of the Rivers and Harbors Act of 1899, or any project sponsored by DuPage County, the State of Illinois, or any unit of the Federal government within the boundaries of DuPage County, Illinois. Furthermore, any activity, work, or project the Chicago District determines would result in more than minimal impacts to the aquatic environment would not be considered eligible for review under the general permit.

The DuPage County Countywide Stormwater and Flood Plain Ordinance (Ordinance) is the authority the government of DuPage County will use to administer its review of the Section 404 program. The Ordinance, and Appendix B to the Ordinance titled Technical Guidance for the DuPage Countywide Stormwater and Flood Plain Ordinance, comprise a comprehensive document integrating stormwater management concerns with wetland issues, water quality, wildlife issues, riparian corridors, and flood control issues. The attached flow chart
(Exhibit 1) details how the permit process will work, and describes the responsibilities of the Corps of Engineers and the DuPage County Department of Economic Development and Planning, Division of Environmental Concerns (DEC) in their review of permit applications.

The transfer of Section 404 permit review authority to DuPage County will empower the county government to make decisions involving wetland resources within its boundaries, and will also serve to reduce the duplication of regulatory review at different levels of government. The general permit will allow DuPage County to integrate local wetland resource concerns into other water-related issues such as flood control, wildlife habitat concerns, preservation and restoration of riparian corridors, stormwater storage, and water quality in long-range county planning. The DuPage County Ordinance regulates the same activities as the Federal Section 404 program; therefore, it is appropriate that the District has developed this general permit. The regulations published in 33 CFR Part 325.2(e)(3) encourage division and district engineers to develop joint procedures with states and other Federal agencies with ongoing permit program for activities also regulated by the Department of the Army. The Chicago District believes that this general permit is in the spirit of the above guidance, and is therefore appropriate.

The general permit will reduce administrative and labor costs to the District by reducing the time spent reviewing permit applications for projects in DuPage County. These savings should result in increased operating efficiency for the Chicago District, while continuing to protect the aquatic resources of DuPage County. The transfer of Section 404 review authority to DuPage County will result in wetland protection equal to Federal regulations, and cumulatively should not have more than a minimal impact on the aquatic environment. The transfer of review authority to DuPage County will allow the Chicago District to concentrate its resources reviewing projects that are likely to have more than minimal impact on the aquatic environment.

The determination of minimal impacts, and the applicability of the general permit, shall remain solely with the Chicago District. Should the District determine that a project could have more than minimal impacts on the aquatic environment, the general permit would not apply, and the project will be reviewed under standard individual permit procedures, as published in 33 CFR Part 325.2(e)(2).

Mitigation and the Section 404(b) (1) restrictions on discharge

Guidelines issued by the USEPA pursuant to Section 404(b) (1) of the Clean Water Act restrict discharges of dredged or fill material under certain circumstances (40 CFR 230.10). The Guidelines outline a sequence of avoidance of wetland impacts, minimization of wetland impacts, and compensation for unavoidable impacts (mitigation sequencing) that is central to the evaluation of permit applications reviewed by the Corps of Engineers. In addition, recent regulations (Compensatory Mitigation for Losses of Aquatic Resources (33 CFR, Part 332)) further enforces this sequencing.

It is important to note that the DuPage County Ordinance uses guidelines similar to the Section 404(b) (1) Guidelines, as stated in Section 15-135, Parts 1-6, of the Ordinance and in Appendix E under the section entitled Requirements For Development In Wetlands. These guidelines stress avoidance and minimization, describe requirements for analysis of alternatives, and specify minimum mitigation ratios for wetland impacts. These guidelines also state that the purpose of the mitigation should be to duplicate or improve the hydrologic, biologic and economic features of the original wetland that would be destroyed. In addition, impact within or affecting wetlands seen to be of especially high value, called critical wetlands in the Ordinance, is prohibited unless it can be conclusively proven that the presence of these
wetlands precludes all economic use of the entire property, and that no practicable alternative to wetland modification exists.

These guidelines are functionally equivalent to the Section 404(b) (1) Guidelines, and are consistent with the recent mitigation rule now utilized by the Chicago District. The DuPage County guidelines provide a reasonable standard for the evaluation of unavoidable wetland impacts. The Chicago District believes that use of these guidelines by DuPage County would satisfy the requirements of the Section 404(b) (1) Guidelines.

Special Conditions:

1. This general permit applies only to Section 404 activities within the established boundaries of DuPage County, Illinois that would have only minimal impacts on the aquatic environment.

2. Processing of applications under this general permit shall proceed as detailed on the attached flow chart (Exhibit 1). The Chicago District reserves the right to modify the flow chart as required.

3. The general permit shall not be applicable to projects sponsored by any county-level unit of government of DuPage County, Illinois, or by any agency of state or Federal government.

4. Activities requiring review under Section 10 of the Rivers and Harbors Act of 1899 are not eligible for the general permit.

5. This General Permit does not authorize the use of earthfill cofferdams, or any practices that would result in a release of sediment into waters of the U.S. Cofferdams shall be constructed of non-erodible materials. Acceptable practices include pre-fabricated rigid cofferdams, sheet piling, inflatable bladders, sandbags and fabric-lined basins. For projects that require installation of a cofferdam, the method or practice to be utilized shall be specified in the project narrative, and clearly labeled on the constructions plans.

6. For utility line projects, directional drilling or dry crossing techniques, such as fluming, shall be used if the waterbody to be crossed contains perennial flow. The construction drawings and project narrative shall depict the location of all construction access areas, dewatering pit(s), jackin and receiving pits, and shall discuss the potential need for "utility checks" within the regulated area, and for the removal and disposal of bentonite slurry or other drilling fluid (by-product).

7. Bank stabilization activities are subject to the following:

   a. Projects that involve the use of structural bank stabilization practices, such as riprap, gabions, lunker boxes, steel sheet piling, or fabric-formed concrete shall not exceed a total length of 500 feet. Riprap materials shall not be placed at a steeper slope than 2:1 (2 horizontal to 1 vertical) for dumped riprap, and 1.5:1 for hand-placed riprap. Should broken concrete be used as riprap, all reinforcing rods shall be cut flush with the surface of the concrete.

   b. Projects that involve replacement of currently functional bank stabilization structures or practices shall include only minor deviations in the structure's configuration or footprint including those due to changes in materials, construction techniques, or current construction codes or safety standards which are necessary to implement the repair.
c. Structural and vegetative/biotechnical practices may be combined, but in no case shall structural practices exceed 500 feet in total length.

d. Structural practices may not be installed in HQARs

e. Bank stabilization shall conform to the existing shoreline and may not be used to reclaim land lost to erosion.

f. No more than one (1) cubic yard per running foot of material shall be used as backfill.

8. This general permit shall not be used to relocate or channelize a linear waterbody such as a river, stream, creek, etc.

9. This general permit does not authorize construction of septic fields in Waters of the United States.

10. DuPage County will implement the pre-discharge notification (PDN) procedures used by the Chicago District to notify other agencies of proposed activities in waters of the United States. The United States Environmental Protection Agency, the Illinois Environmental Protection Agency, the United States Fish and Wildlife Service, and the Illinois Department of Natural Resources will be notified of each pending permit action, and will be given ten (10) calendar days to respond if they intend to provide substantive, site-specific comments. If so contacted by any of these agencies, the County will delay pending permit action, not to exceed fifteen (15) calendar days for agency written comments. The Chicago District will continue to coordinate the pre-discharge notification process with the Illinois Historic Preservation Agency. The PDN will identify which General Permit Class (Class I or Class II - see below) is being sought.

11. The Chicago District retains oversight authority of all projects reviewed under this general permit, and reserves the right to exert discretionary authority over any permit application at any time.

12. The Chicago District may, at its discretion, apply special conditions to projects authorized by this general permit as needed in order to insure that these projects would not have more than minimal impacts on the environment.

13. Wetland mitigation (compensation) will be required at a minimum ratio of 1.5:1.0 for all wetland impacts authorized by this general permit, as stated in Section 15-135 of the DuPage County Ordinance.

14. Each permit application for work reviewed under the general permit in DuPage County will be examined by the Chicago District for the environmental factors considered by the Chicago District, as prescribed by the regulations published in 40 CFR Part 230.10, and 33 CFR Part 325 and 332.

15. The determination of minimal impacts, and the applicability of this general permit, shall remain solely with the Chicago District. Should the District determine that a project would have more than minimal impacts on the aquatic environment, this general permit would not be applicable. The applicant will be informed in writing that the general permit would not apply, and that the project would be reviewed by the Chicago District under standard individual permit procedures, as published in 33 CFR Part 325.2(e)(2).

16. The District recognizes the County's wetland mitigation program in accordance with Section 15-136 of the DuPage County Stormwater Ordinance. The wetland mitigation program adopted by the County serves to mitigate many small cumulative wetland impacts within a local watershed area and therefore meets the intent of federal mitigation requirements.
In order to assure that the above-mentioned county mitigation projects meet federal standards, each mitigation area must be permitted under appropriate Corps of Engineers procedures as noted in 33 CFR Part 332. As part of the approval of each wetland mitigation area, the County will provide the documentation to the District demonstrating compliance with the DuPage County Stormwater and Floodplain Ordinance and 33CFR Part 332. Additionally, County will identify who will be responsible for the long-term management of the site.

Annual reports must be provided, by the DEC, document the status of each mitigation project and identifying specific permitted projects which utilized the sites to satisfy mitigation requirements. The District can, at any time, request the administrative records of the general permit program as well as any associated mitigation information from the DEC.

All applications which propose compensatory efforts within the County’s wetland mitigation program are subject to County permit review under the general permit by the Department of Economic Development and Planning, Division of Environmental Concerns prior to acceptance. Acceptance of mitigation at County mitigation sites for complete waiver community projects, proposed for the County wetland program will be at the discretion of the District.

17. The Chicago District reserves the right to enforce all applicable Laws and regulations pertaining to Section 404 activities within DuPage County, independent of any enforcement actions DuPage County, or its agents, may pursue under the Ordinance. The Chicago District also reserves the right to enforce the conditions of any existing or future Department of the Army permits within DuPage County, Illinois.

18. The Chicago District reserves the right to conduct site inspections at any reasonable time on any project sites requiring authorization under Section 404 of the Clean Water Act in DuPage County, Illinois.

19. The Chicago District shall retain the final authority to determine the extent of jurisdictional areas in DuPage County, Illinois pursuant to Section 404 of the Clean Water Act.

20. The policies of this general permit will be subject to review at any time, but at least every five (5) years. This permit may be modified, suspended, or revoked in accordance with 33 CFR Part 325, if it is determined that the public interest is best served by doing so.

Further Information:

1. Limits of this authorization,
   a. This permit does not obviate the need to obtain other federal, state, or local authorizations required by law.
   b. This permit does not grant any property rights or exclusive privileges.
   c. This permit does not authorize any injury to the property or rights of others.
   d. This permit does not authorize interference with any existing or proposed Federal project.

2. Limits of Federal Liability: the Federal Government does not assume any Liability for the following:
a. Damages to the permitted project or uses thereof as a result of other permitted or unpermitted activities or from natural causes.

b. Damages to the permitted project or uses thereof as a result of current or future activities undertaken by or on the behalf of the United States in the public interest.

c. Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit.

d. Design or construction deficiencies associated with the permitted work.

e. Damage claims associated with any future modifications, suspension, or revocation of this permit.

3. Reliance on Applicant's Data: The determination of this office that issuance of this permit is not contrary to the public interest was made in the reliance on the information you provided.

4. Reevaluation of Permit Decision. The office may reevaluate its decision on this permit at any time the circumstances warrant. Circumstances that could require a reevaluation include, but are not limited to, the following:

a. You fail to comply with the terms and conditions of this permit.

b. The information provided by you in support of your permit application proves to have been false, incomplete, or inaccurate (see 3 above).

c. Significant new information surfaces which this office did not consider in reaching the original public interest decision.

Such a reevaluation may result in a determination that it is appropriate to use the suspension, modification, and revocation procedures contained in 33 CFR 325.7 or enforcement procedures such as those contained in 33 CFR 326.4 and 326.5.

State 401 Water Quality Certification:

Water quality certification under Section 401 of the Clean Water Act is required from the Illinois Environmental Protection Agency (IEPA) for any activities authorized under this General Permit. This General Permit contains two activity based classes: Class I which includes activities with Special Conditions that will include those State 401 Water Quality Certification conditions as issued by the IEPA on October 1, 2008, and Class II which include all other activities under this General Permit, projects that impact over 0.5 acres of wetland, or impact high-quality aquatic resources. Class II activities require individual 401 Water Quality Certification from the IEPA.

Class I -

Class I activities include:

1. RESIDENTIAL, COMMERCIAL AND INSTITUTIONAL DEVELOPMENTS for the construction of residential, commercial and institutional developments and associated infrastructure, such as roads, utilities, detention areas, and recreation areas.

2. WETLAND AND RIPARIAN RESTORATION AND ENHANCEMENT for the restoration, creation, and enhancement of wetlands and riparian areas. Wetland restoration and enhancement activities include installation, removal, and
maintenance of small water control structures, dikes and berms; activities
needed to reestablish vegetation, including plowing or discing for seed bed
preparation; mechanized land-clearing to remove undesirable vegetation; and
other related activities.

3. UTILITY LINE PROJECTS for the construction, maintenance, and repair of
utility line activities and associated facilities.

4. MAINTENANCE for repair or rehabilitation of any previously authorized,
currently serviceable, structure or fill, provided that the structure or
fill is not to be put to uses differing from those uses specified or
contemplated for it in the original permit or the most recently authorized
modification.

5. BANK STABILIZATION

Class II -

Class II Activities include:
1. All other activities not listed under Class I.
2. Projects that impact over 0.5 acres of wetland, or impact high-quality
   aquatic resources.

Class I Special Conditions:

The following additional conditions are hereby made conditions of this General
Permit for Class I activities and are required for Section 401 Water Quality
Certification. On October 1, 2008, the IEPA granted Section 401
certification for General Permit Class I Activities meeting with these
conditions:

a. The applicant shall not cause:

   1) violation of applicable water quality standards of the Illinois
      Pollution Control Board Title 35, Subtitle C: Water Pollution Rules and
      Regulations;

   2) water pollution defined and prohibited by the Illinois Environmental
      Protection Act; or

   3) interference with water use practices near public recreation areas or
      water supply intakes.

b. The applicant shall provide adequate planning and supervision during the
   project construction period for implementing construction methods, processes,
   and cleanup procedures necessary to prevent water pollution and control
   erosion.

c. Any spoil material excavated, dredged or otherwise produced
   must not be returned to the waterway but must be deposited in a self-contained
   area that is in compliance with all State statutes, regulations and permit
   requirements with no discharge to waters of the State unless a permit has been
   issued by the Illinois EPA. Any backfilling must be done with clean material
   and placed in a manner to prevent violation of applicable water quality
   standards.

d. All areas affected by construction shall be mulched and seeded as soon
   after construction as possible. The applicant shall undertake necessary
   measures and procedures to reduce erosion during construction. Interim
   measures to prevent soil erosion during construction shall be taken and may
include the installation of staked straw bales, sedimentation basins and temporary mulching. All construction within the waterway shall be conducted during zero or low flow conditions. The applicant shall be responsible for obtaining a NPDES Storm Water Permit prior to initiating construction if the construction activity associated with the project will result in the disturbance of one (1) or more acres, total land area. A NPDES Storm Water Permit may be obtained by submitting a properly completed Notice of Intent (NOI) form by certified mail to the IEPA’s Division of Water Pollution Control, Permit Section.

e. The applicant shall implement erosion control measures consistent with the most recent edition of the Illinois Urban Manual (IEPA/USDA, NRCS).

f. The applicant is advised that the following permit(s) must be obtained from the Illinois EPA: The applicant must obtain permits to construct sanitary sewers, water mains, and related facilities prior to construction.

g. The backfill used in the stream crossing trench shall be predominantly sand or larger size material, with <20% passing a #230 U.S. sieve.

h. Any channel relocation shall be constructed under dry conditions and stabilized to prevent erosion prior to the diversion of flow. [Applicable only to projects which involve relocating stream channels.]

i. The proposed work shall be constructed with adequate erosion control measures (i.e., silt fences, straw bales, etc.) to prevent transport of sediment and materials to the adjoining wetlands and/or downstream.

j. Backfill used within trenches passing through surface waters of the State, except wetland areas, shall be clean course aggregate, gravel or other material which will not cause siltation, pipe damage during placement, or chemical corrosion in place. Excavated material may be used only if:

   1) particle size analysis is conducted and demonstrates the material to be at least 80% sand or larger size material, using #230 U.S. sieve; or

   2) excavation and backfilling are done under dry conditions.

k. Backfill used within trenches passing through wetland areas shall consist of clean material that will not cause siltation, pipe damage during placement, or chemical corrosion in place. Excavated material shall be used to the extent practicable, with the upper six (6) to twelve (12) inches backfilled with the topsoil obtained during trench excavation.

l. Any applicant that is proposing activities in a mined area or previously mined area shall provide to the Illinois EPA specifications on sediment and materials used that are considered “acid-producing material” as defined in 35 Ill. Adm. Code, Subtitle D. If considered “acid-producing material,” the applicant shall obtain a permit to construct pursuant to 35 Ill. Adm. Code 404.101.

m. Asphalt, bituminous material and concrete with protruding material such as reinforcing bar or mesh shall not be 1) used for backfill, 2) placed on shorelines/stream banks, or 3) placed in waters of the State.

n. Applicants that use site dewatering techniques in order to perform work in perennial streams for construction activity shall maintain flow in the stream during such construction activity by utilizing dam and pumping, fluming, culverts or other such techniques.
Your signature below, as a permittee, indicates that you accept and agree to comply with the terms and conditions of this permit.

PERMITTEE

[Signature]

Thomas Cuculich
Director, DuPage County
Department of Economic Development and Planning

[Date]
